Congratulations.
You made the shortlist.

You are one of a small group we are shortlisting from many applicants. One assignment is the next step, and this PDF has everything you need.

One AI agent that creates the role agents every offline store needs.

~7 enterprise customers	**+23.6pp** conversion when the agent names the shopper	**+2%** store revenue lift at The Sleep Company	**Sep 2026** breakeven cleared

Deadline: Sunday, 11 October 2026, 6:00 PM IST · send to mukunda@on-ground.ai

WHY ON-GROUND.AI

Most offline sales are lost after the first conversation.

86%

of walk-ins leave with zero follow-up. No name. No number. No next call. The sale closes on a competitor's WhatsApp. (Bain, 2024)

We built the fix: an AI platform for premium products and services sold offline. It solves two problems.

1 Leads that get lost

Notes get dropped between the call centre, the store and the field. Staff have little time and little reason to write them down.

2 Leads that do not close

Every lead gets a clear SOP and a deadline to close. We support staff and the managers who coach them, in the app, on calls and by voice AI.

Customers include

The Sleep Company · Furnishka · Duroflex · Tractor Junction · DCDC · Nestasia

Real stores, real shoppers, real conversations: over 5,000 floor conversations analysed across three retail brands.

Selected
by Sarvam as a startup to watch

Trusted
by about seven enterprise customers

Led
by two founders who work with you directly

The founders

Rashmi Sehgal
Founder and CEO
Ex-Head of Product, Pine Labs. Razorpay.

Mukunda Dwarkanath
Co-founder
Microsoft. Repeat founder.

Why it matters to you: a small team, real customers, and founders who read your work. Your submission goes straight to Mukunda.

YOUR MISSION

Rebuild our Call Centre app.

This is the app a call centre agent keeps open through a shift. Match our mock, make it work, and show us how you think.

1
Explore the mock
Open the attached mock file and click through every screen.

2
Build it
Your own code. Any stack. Sample data only.

3
Submit
Repo and README by Sunday, 6:00 PM IST.

The mock is attached to our email: OnGround_CallCentre_App_Mock.html. Save it, then double-click to open it in Chrome.

Must build

- App shell: sidebar and top bar
- Dashboard
- Plan: Calls to make, Incoming, Recent
- Calendar
- Pulse home and a channel chat
- Leads modal with paging

Bonus

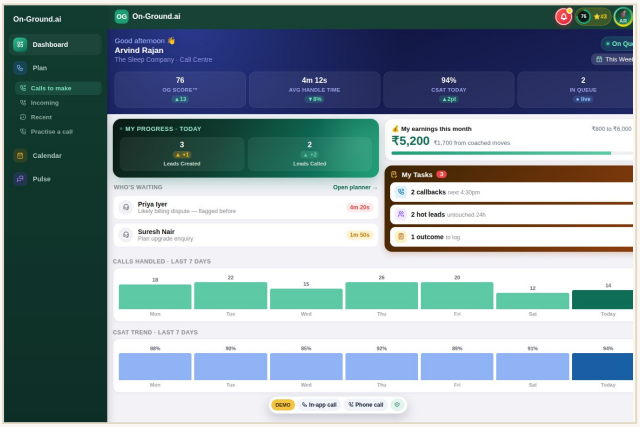

+ Send a message in a channel
+ Answer the "Needs your input" card
+ Practise a call and Call back
+ Works on a phone-width screen
+ Charts with a library you like

Ground rules

- **Stack:** your choice. React or Angular is preferred. Plain HTML, CSS and JavaScript is fine if you say why.
- **Data:** a local JSON file or small mock module. No backend.
- **Your own code:** do not save the mock page or copy its source. We will check.
- **AI tools:** allowed. List them in your README and be ready to explain your code.
- **Look:** keep type sizes restrained and close to the mock. We review in the latest Chrome on a laptop.
- **Git:** commit as you go. We read the history.

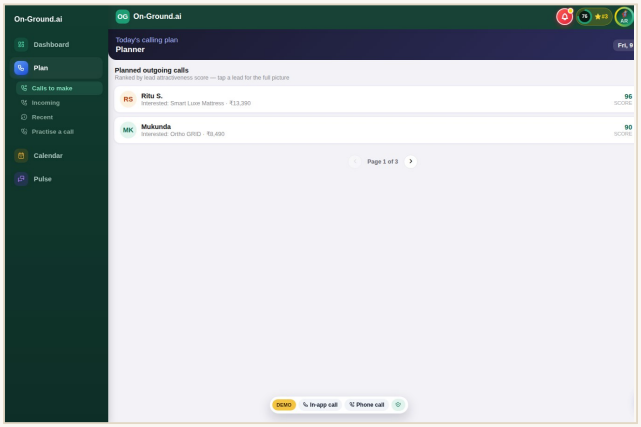

This is what you are building.

1 Dashboard

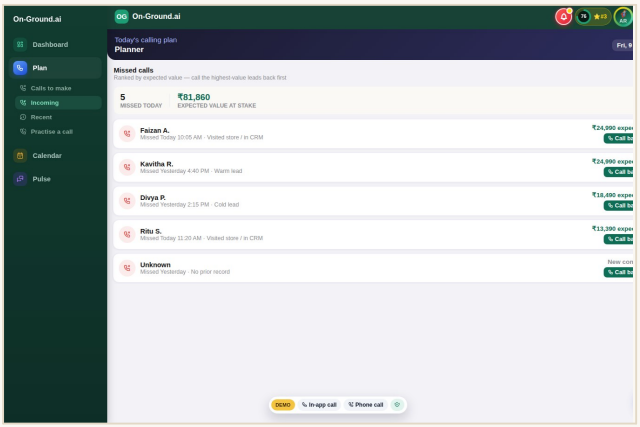

- KPI cards, progress, who is waiting
- Earnings, tasks and 7-day charts

2 Calls to make

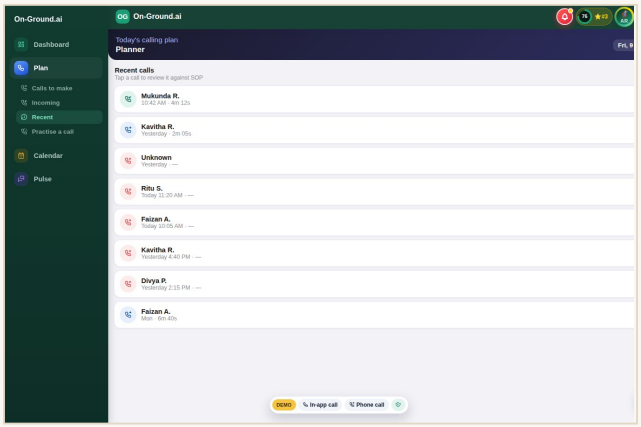

- Leads ranked by score
- Expandable rows with paging

3 Incoming

- Missed calls with value at stake
- Call back on every row

4 Recent

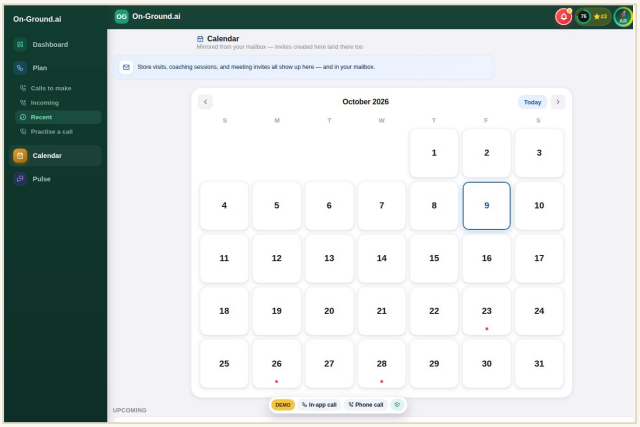

- Calls by type, time and length
- Tap a call to review it

THE SCREENS · 2 OF 2

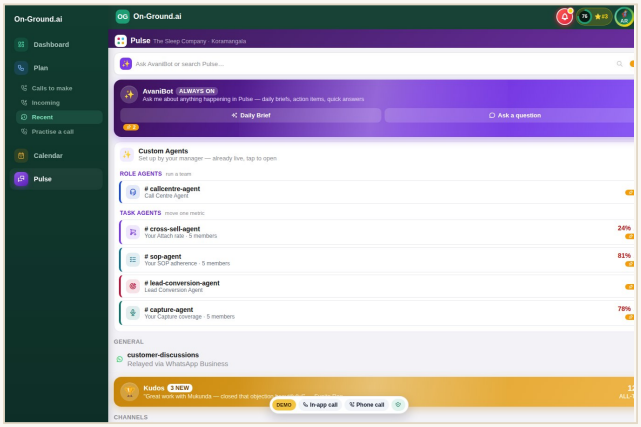

Same shell, more depth.

5 Calendar

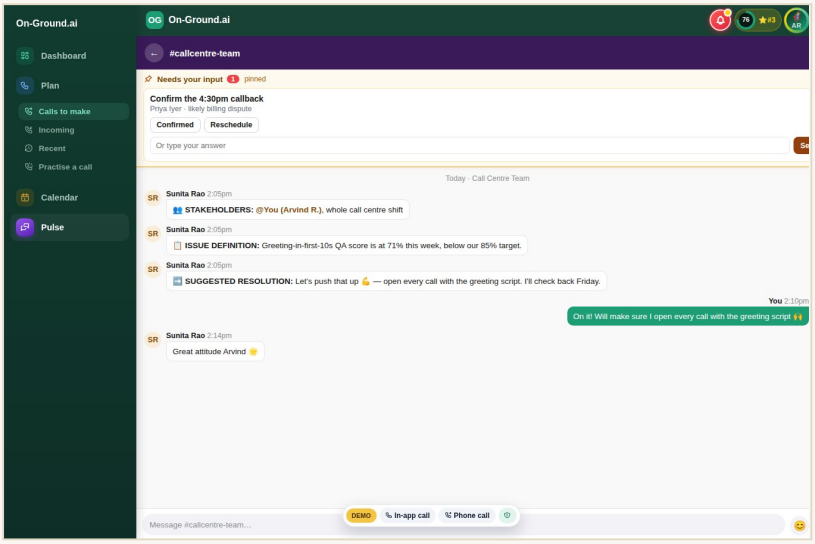

- Month grid with event dots
- Today button and month switcher

6 Pulse home

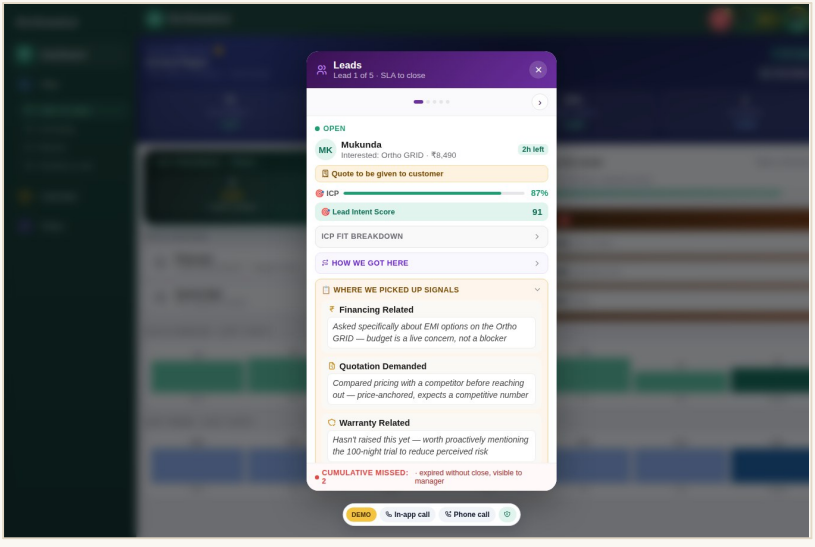

- AvaniBot, role and task agents
- Channels and Kudos

7 Pulse channel

- Back button and channel header
- Pinned "Needs your input" card with two buttons and a reply box
- Chat bubbles: others left, agent right, with times

8 Leads modal

- Opens from the dashboard task list
- Lead card with ICP score and lead intent score
- Collapsible buying signals
- Next and previous paging

The DEMO strip and floating dial button are demo tools, so they are optional. Use the mock file for hover, click and scroll behaviour.

HOW WE WILL REVIEW

What good looks like.

WHAT TO SEND

GitHub repo
Public, or private and shared with the address you email from.

README
How to run, stack and why, what is done and skipped, AI tools used.

Bonus
A live link and a screen recording of up to 2 minutes.

To: mukunda@on-ground.ai
Subject: Assignment Submission: your full name
By: Sunday, 11 October 2026, 6:00 PM IST. Late submissions are not reviewed.

We are excited to see what you build. Questions are welcome. Reply to our email and ask early.
